March 22, 2017

The Honorable John A. Alario, Jr.,
President of the Senate
The Honorable Taylor F. Barras,
Speaker of the House of Representatives

Dear Senator Alario and Representative Barras:

This report provides the results of our performance audit that evaluated whether the Louisiana Public Service Commission (LPSC) approved water rates for private water systems timely, and if the rates charged by governmental systems are high enough to cover their expenses.

The report contains our findings, conclusions, and recommendations. Appendix A contains LPSC's and the Louisiana Department of Health's (LDH) responses to this report. I hope this report will benefit you in your legislative decision-making process.

We would like to express our appreciation to the management and staff of LPSC, LDH, the Louisiana Rural Water Association, and the water systems we surveyed for their assistance during this audit.

Sincerely,

Daryl G. Purpera, CPA, CFE
Legislative Auditor

Evaluation of Water Rates in Louisiana Louisiana Public Service Commission

March 2017

Audit Control # 40140068

Introduction

We evaluated water rates in Louisiana, including whether the Louisiana Public Service Commission (LPSC) approved rates for private water systems timely, and whether the rates charged by governmental systems are high enough to cover their expenses. We conducted this performance audit because the most recent report card issued by the American Society of Civil Engineers (ASCE) rated Louisiana's drinking water infrastructure as a D+, meaning our infrastructure is poor and crumbling.¹ ASCE emphasized the importance of better planning and the need for additional funding because Louisiana's aging water infrastructure is not capable of providing enough safe drinking water to meet future demands. Therefore, it is important that water systems set rates at appropriate levels to provide for both normal operational costs and increasing infrastructure costs so that systems can provide safe drinking water to consumers now and in the future.

In 2011, the United States Environmental Protection Agency (EPA) projected that Louisiana water systems would need to spend \$5.3 billion on drinking water infrastructure over the next 20 years.

Source: EPA's *Drinking Water Infrastructure Needs Survey and Assessment - Fifth Report to Congress* (April 2013).

There are 850 water systems in Louisiana that bill customers for water services, including private for-profit systems, private nonprofit systems, and governmental systems that are owned and/or operated by cities, towns and parishes.² Exhibit 1 summarizes the number and percentage of water systems in Louisiana, by type.

LPSC is required by the Louisiana Constitution³ to regulate the rates of private for-profit systems and until 2016⁴ was also responsible for approving the rates of private nonprofit systems.

¹ http://www.infrastructurereportcard.org/wp-content/uploads/2013/02/ASCE_Louisiana_Infrastructure_ReportCard2012.pdf

² While Louisiana has a total of 1,366 water systems, this audit focused only on the 850 systems that bill customers for water services. Examples of water systems that do not bill for water services include schools, factories, hospitals, campgrounds, gas stations, and mobile home parks or apartment complexes that include water usage with rent charges.

³ Article IV, Section 21(B) and (C)

⁴ In August 2016, private nonprofit systems were exempted from LPSC's regulation. Act 444 divided the responsibility of approving rates for these systems amongst the United States Department of Agriculture, Louisiana Department of Health, and the Louisiana Rural Water Association (LRWA). Act 444 also requires the Louisiana Legislative Auditor to review and approve water rates studies conducted by LRWA.

Upon request of a water system, LPSC conducts a rate study to ensure the system's rates are reasonably priced for consumers and allow the system an opportunity to earn a fair rate of return on investments. The rates of governmental water systems are not approved by a centralized entity but instead by their local councils, mayor,⁵ or water boards.

The rates that water systems charge vary greatly throughout the state. Rates can vary for multiple reasons, including costs associated with the system's geographic location, the quality of the source water, the number of customers, etc. Using information from LPSC and our survey of water systems, we calculated that residential customers' monthly bills range from \$6.90 to \$58.50 for 5,000 gallons of water per month.⁶ Exhibit 2 shows the median and range in residential customers' monthly bills, by water system type, in Louisiana. Appendix C outlines the bill amounts for residential and commercial customers for each water system.

Exhibit 2 Louisiana Residential Monthly-Equivalent Water Bills 5,000 Gallon Consumption		
System Type	Median	Range
Private For-Profit	\$24.25	\$9.61 - \$55.00
Private Nonprofit	\$26.00	\$10.00 - \$58.50
Governmental	\$23.40	\$6.90 - \$58.00
All Water Systems	\$24.50	\$6.90 - \$58.50
Source: Prepared by legislative auditor's staff using information obtained from LPSC and water system survey responses.		

The objective of this performance audit was:

To evaluate whether LPSC approved water rates for private water systems timely, and if the rates charged by governmental water systems are high enough to cover their expenses.

Overall, we found that LPSC did not approve water rates timely for six (19.4%) of 31 rate increase requests. In addition, we found that 87 (41.0%) of the 212 governmental water systems we reviewed had expenses that exceeded revenues in fiscal year ending 2015, which may indicate their water rates are not high enough. However, other factors, including aging infrastructure and water loss, may also contribute to systems having expenses that exceeded revenues. These issues are listed on the next page and discussed in further detail throughout the remainder of the report. Appendix A contains LPSC's and LDH's responses to this report, and Appendix B details our scope and methodology. Appendix C provides more detailed information on residential and commercial monthly water bills, and Appendix D provides more detailed information on the revenues and expenses, by parish, of each governmental water system. Appendix E provides general information on all of the individual water systems in Louisiana, by parish.

⁵ Water boards are typically appointed by the local council or parish police jury.

⁶ For customers that live within systems' political boundaries. Local governments often serve customers who live outside of city limits, and others specify geographical boundaries within their service areas and identify their customers as residing "inside" and "outside" those boundaries.

Objective: To evaluate whether LPSC approved water rates for private water systems timely, and if the rates charged by governmental water systems are high enough to cover their expenses.

It is important that LPSC approve rate increase requests timely so that water systems can charge rates that allow them to cover the full costs of doing business and provide Louisiana residents access to safe drinking water both now and in the future. We identified the following issues:

- **LPSC needs to improve the timeliness of its rate reviews for private water systems.** During fiscal years 2013 through 2015, LPSC did not approve six (19.4%) of the 31 requests for water rate increase requests within 12 months as required by the Louisiana Constitution.
- **Better coordination between LPSC and LDH would help ensure that LPSC is regulating rates for all water systems as required by the Louisiana Constitution.** We identified 14 water systems for which LPSC had not approved initial rates or received the required annual reports from the systems to ensure rates had not been increased without approval.

In addition, governmental water systems may not be charging high enough rates to cover the costs of providing safe drinking water. Of the 212 water systems we reviewed, 87 (41.0%) had expenses that exceeded revenues in fiscal year ending 2015, which may indicate that these systems are not charging high enough rates. However, other factors, including aging infrastructure and water loss, may also contribute to systems having expenses that exceeded revenues. In addition, concern over customers' ability to pay makes it difficult for these systems to raise rates.

These issues are explained in more detail below.

LPSC needs to improve the timeliness of its rate reviews for private water systems. During fiscal years 2013 through 2015, LPSC did not approve six (19.4%) of the 31 water rate increase requests within 12 months as required by the Louisiana Constitution, primarily due to water systems not providing information timely.

The Louisiana Constitution requires LPSC to approve rate increases for private water systems within 12 months after the system files a proposed rate schedule with LPSC.⁷ The constitution also allows the commission to authorize water systems to charge higher interim rates

⁷ Article IV, Section 21 (D)(1)

while waiting on rate increases to be approved, but water systems must refund customers if the interim rates are ultimately not approved.⁸ During fiscal years 2013 through 2015, while LPSC approved rate increases on average within 270 days, it did not approve six (19.4%) of the 31 water rate increase requests within the 12-month requirement. These approvals were 86 days late on average, ranging from 36 to 134 days late. It is important that LPSC approve rate increase requests timely so that water systems can continue to afford to operate and maintain water systems and provide safe water to consumers.

LPSC's process for reviewing rate increase requests requires a thorough analysis of water systems' financial statements, general ledgers, service contracts, and other documents to ensure that revenues and expenses are reasonable and that rate increases are justified. To determine if requested rates are reasonable and expenses are allowable, LPSC staff typically makes multiple data requests from systems that include due dates during the course of the reviews. In each of the six untimely cases we identified, LPSC's review was delayed because the water systems did not provide requested information by the due date. After each review, LPSC staff makes a recommendation to the Commission, which then votes to accept, reject, or modify LPSC staff's recommendation regarding the rate.⁹

"The lengthy LPSC approval process, with the potential to be denied the requested (and necessary) increase is a burden on systems already strained by frequently increasing costs and few employees... Any simplification of this process would be most welcome."

Source: LPSC Water System Survey

According to our survey, 31 (52.5%) of the responding 59 water systems indicated that LPSC's process for approving rates took too long. We contacted five regional states¹⁰ and found that four (80.0%) had shorter timeframes than Louisiana's Constitutional requirement of 12 months to approve rate increases, ranging from six to 10 months.

Act 444 of the 2016 Regular Legislative Session moved the responsibility of regulating private nonprofit water systems' rates from LPSC to the United States Department of Agriculture (USDA), LDH, and the Louisiana Rural Water Association (LRWA). Act 444 also requires the Louisiana Legislative Auditor to review and approve water rate studies conducted by LRWA. According to LPSC, this was likely initiated by concerns from private nonprofit water systems that LPSC's process for approving rate increases was too lengthy. Although this move will reduce LPSC's workload and potentially increase the timeliness of its rate reviews of private for-profit water systems, another way LPSC could shorten its rate review process would be to allow water systems to increase rates by a small percentage each year without a full rate review. For example, Florida allows systems to raise rates a small percentage each year for increases in eligible operational and maintenance expenses defined in state law. This percentage is tied to inflation and set annually by Florida's Public Service Commission. While these increases require Florida's staff to ensure that expenses are eligible, these increases do not require a full

⁸ The Louisiana Constitution also allows water systems to charge interim rates if LPSC takes longer than 12 months, but water systems must put up a security bond. Also, water systems must refund customers if the interim rates are ultimately not approved.

⁹ For-profit water systems also are required to have a hearing before an Administrative Law Judge where LPSC staff and the water system present their rationale for their respective positions on the proposed water rates and then the judge will render a recommendation which is presented to the Commission for a vote.

¹⁰ Alabama, Arkansas, Florida, Mississippi, and Texas

rate review or approval from the Commission and must be completed within 60 days. According to LPSC, the Constitution gives LPSC the authority to make such changes in its rate approval process. If Louisiana adopted a process similar to Florida's, it would allow LPSC to approve small increases quickly and focus resources on reviewing larger increases needed by other systems.

Recommendation 1: LPSC should ensure that it reviews all rate increase requests from water systems within 12 months as required by law.

Summary of Management's Response: LPSC agrees with this recommendation. According to LPSC, while staff could have taken aggressive measures to obtain information more timely, such as motions to compel information or denying rate applications based on the water system's failure to timely provide information, LPSC staff continued to work with the companies to get the necessary information to complete the proceeding even though the outcome was that the process took longer than 12 months. See Appendix A-1 for LPSC's full response.

Recommendation 2: LPSC should evaluate whether implementing an abbreviated process for annual inflationary rate increases would be a feasible option. This option may encourage more water systems to request rate increases when necessary.

Summary of Management's Response: LPSC agrees with this recommendation. According to LPSC, it has an open rulemaking proceeding to investigate the possible establishment of a rule requiring LPSC jurisdictional water utilities to implement rate stabilization plans or other types of periodic rate reviews. See Appendix A-1 for LPSC's full response.

Better coordination between LPSC and LDH would help ensure that LPSC is regulating rates for all water systems. We identified 14 (3.3%) of the 426 private water systems for which LPSC had not approved initial rates or received the required annual reports from the systems to ensure rates had not been increased without approval.

In addition to reviewing rate increases for existing systems, LPSC is required to review proposed rates for new water systems. LPSC regulations state that no water system regulated by LPSC shall provide water for a fee without LPSC review and approval.¹¹ LPSC can penalize a water system up to \$10,000 if it does not get approval for its initial rates from LPSC prior to operation.¹² Once LPSC approves the initial rates, water systems are required to submit annual reports so that LPSC staff can monitor reported revenues and ensure rates have not increased without LPSC approval. However, to begin this process, LPSC relies on new water systems to

¹¹ Section 201 of LPSC Water and Wastewater Regulations Corrected

¹² Section 1301 of LPSC Water and Wastewater Regulations Corrected

self-register with the agency; otherwise, LPSC becomes aware of new systems if it receives a complaint from a customer of an unregulated water system.

To verify that LPSC was regulating rates for all water systems as required, we compared LPSC's list of systems to those regulated by LDH for compliance with state and federal drinking water regulations. We identified 14 systems¹³ that LDH was regulating for drinking water safety; however, none of these systems had sent their initial rates to LPSC for approval or had provided annual reports as required. Of these 14 systems, LPSC was unaware that six (42.9%) were operating without having requested and received approval of their initial rates. LPSC was aware of the remaining eight (57.1%) systems, had contacted them to bring them into compliance, and had assessed penalties to seven of these systems. However, LPSC had not received the required rate information nor collected any penalties from these systems at the time of our audit. We also alerted LDH about two systems we found that LPSC had approved rates for, but were not being regulated by LDH.¹⁴

Effective coordination between LPSC and LDH is important so that these agencies can ensure they are regulating the reasonableness of rates and water quality for all water systems in the state, as required by the Louisiana Constitution and state law. Other states we contacted have a process for coordinating between agencies responsible for approving rate increases and those responsible for ensuring water quality. For example, before a new water system can be constructed, Mississippi's Department of Health (MDH) requires systems to be certified financially and managerially viable by the Mississippi Public Service Commission (MPSC). MPSC requires new water systems to show that they have received approval from MDH before they will approve the system. If LPSC and LDH were to notify each other when new water systems are identified, they could help to ensure that all water systems were being regulated for both reasonableness of rates and water quality.

Recommendation 3: LPSC should follow up with the 14 noncompliant systems and ensure that it approves their rates as required, and cite and collect penalties when appropriate.

Summary of Management's Response: LPSC agrees with this recommendation. According to LPSC, 13 of the 14 systems identified in the audit report are nonprofit systems that are now exempt from LPSC's jurisdiction. LPSC staff will follow up with the one for-profit system to bring it into compliance as recommended. See Appendix A-1 for LPSC's full response.

Recommendation 4: LPSC should notify LDH when new water systems submit proposed rates to help LDH ensure that it is regulating all water systems as required by the Safe Drinking Water Act of 1996.

¹³ These 14 systems include 13 nonprofit water systems that LPSC no longer regulates as of August 2016, but were required to regulate during our audit scope.

¹⁴ LDH has since added these two systems to its inventory of regulated water systems.

Summary of Management's Response: LPSC agrees with this recommendation. According to LPSC, it will implement procedures to work with LDH on safeguarding that all new water systems are operating within the laws and regulations of the state of Louisiana. See Appendix A-1 for LPSC's full response.

Recommendation 5: LDH should notify LPSC when new water systems apply for permits to begin construction to help LPSC ensure that it is regulating all water systems' rates as required by the Louisiana Constitution.

Summary of Management's Response: LDH agrees with this recommendation. According to LDH, it will send LPSC copies of permits for new water systems. See Appendix A-2 for LDH's full response.

Governmental water systems, which are not regulated by LPSC, may not be charging high enough rates to cover the costs of providing safe drinking water. Of the 212 water systems we reviewed, 87 (41.0%) had expenses that exceeded revenues. However, other factors, including aging infrastructure and water loss, may also contribute to systems having expenses that exceeded revenues. In addition, concern over customers' ability to pay makes it difficult for these systems to raise rates.

The EPA recommends that water systems charge high enough rates to cover expenses so that systems can maintain financial stability and collect reserve funds to cover future costs (i.e., infrastructure repairs, compliance with future regulations, etc.). We reviewed annual financial statements for 212 governmental water systems and found for fiscal year 2015, 87 (41.0%) water systems had expenses that exceeded their revenues.¹⁵ Furthermore, 44 (50.6%) of these 87 systems also had expenses that exceeded revenues in fiscal years 2013 and 2014. Appendix D provides more detailed information on the revenues and expenditures from financial statements for each governmental water system.

While water systems with expenses exceeding revenues may not be charging high enough rates, there are other factors that could also contribute to expenses exceeding revenues. These factors include aging infrastructure, water loss, flat rate water systems, smaller water systems, and collection practices as described in more detail below. Although this section is based on our review of revenues and expenses of governmental water systems, private water systems may face some of the same issues discussed below. Appendix E provides information by water system on these factors.

¹⁵ We were unable to review all systems' water revenues and expenses because 212 (50.0%) of the 424 local governments operate multiple utility systems (i.e., sewer, gas, electricity, etc.) and do not report revenue and expenses separately for each utility.

Aging Infrastructure. In 2011, the EPA estimated that Louisiana’s water systems would need to spend \$5.3 billion on drinking water infrastructure over the next 20 years. Based on our survey of water systems in Louisiana, 301 (59.4%) of the responding 507 water systems¹⁶ have infrastructure that is currently between 30 and 50 years old, and 76 (15.0%) systems have infrastructure that is older than 50 years. Water systems with aging infrastructures typically have higher expenses since pipes may need to be repaired or replaced. According to the American Water Works Association (AWWA), postponing these repairs and replacements increases the odds of facing higher costs associated with water main breaks and other infrastructure failures that can threaten public health and safety. For instance, a consulting engineer estimated that it would cost approximately \$8 million to repair several maintenance deficiencies identified with the Town of St. Joseph’s 90-year-old water system that resulted in drinking water with high levels of iron. If water systems do not generate enough revenue to properly maintain their infrastructure, they may also face issues similar to the Town of St. Joseph.

Water systems can apply for loans or grants to assist with funding for expenses such as infrastructure replacement. For example, LDH administers the Drinking Water Revolving Loan Fund that provides loans to assist public water systems with funding to improve drinking water infrastructure. In addition, the USDA Rural Development Program offers low interest loans to small, financially-distressed rural water systems to extend and improve facilities. However, the more money a system borrows, the more interest expense it will owe in the future. While the EPA acknowledges that it may make more financial sense to borrow money to cover the cost of certain projects, it also recommends setting aside money each year into a reserve account to cover future infrastructure expenses.

Water Loss. According to the AWWA, as water systems’ infrastructure ages, water pipes are more likely to crack or corrode and water leaks become more common. In addition to leaks, water can also be “lost” through theft, human error, and inaccurate water meters. Water loss increases expenses because systems are spending money treating water that does not reach the consumer and therefore cannot be billed. The EPA emphasizes the importance of identifying water loss so that systems can implement controls to reduce or eliminate this loss, and estimates that 75% of water loss is recoverable.

According to our survey, 206 (43.0%) of the responding 479 water systems do not track water loss. In addition, 49 (17.9%) of 273 systems responded that they do track water loss, but did not provide an estimate on how much water was lost. Of the remaining 224 systems that do track water loss, 88 (39.3%) indicated that their water loss accounts for more than 15% of total water consumed. While there is currently no requirement for water systems in Louisiana to track water loss, 26 other states require systems to track and report water loss.¹⁷ For example, Georgia passed the Georgia Water Stewardship Act in 2010 that requires public water systems serving more than 3,300 customers to conduct water loss audits and report the results to Georgia’s Department of Natural Resources. Georgia also requires water systems to implement a water loss control program and demonstrate progress toward improving water loss. In addition to helping systems reduce costs, controlling water loss can help protect the public by reducing potential entry points in pipes for disease-causing pathogens.

¹⁶ Although we sent surveys to all 850 water systems, not all systems responded to the survey or to every question; therefore, the total number of respondents for each question discussed in this report differs.

¹⁷ Per the Natural Resources Defense Council.

Flat Rate Water Systems. Some water systems do not use meters to measure water use. Since these water systems cannot charge customers based on usage, they must charge customers flat rates. We found that at least 43 water systems in Louisiana charge residential customers a flat rate ranging from \$7.27 to \$55.00 per month. Water systems that charge flat rates may have higher expenses because there is no incentive for customers to use less water. For example, one system we surveyed charges residential customers a monthly flat rate of \$17.00 and had expenses that exceeded revenues for fiscal years 2013, 2014, and 2015. In addition, the Town of Kinder water system stated that since it installed meters and stopped charging flat rates in 2002, the water usage for the town has dropped significantly, and expenses have decreased. This system stated that prior to metering customers there was no incentive for customers to conserve water or repair leaks timely.

According to the Louisiana Rural Water Association (LRWA), some local governments or private system board members may be hesitant to install meters and eliminate the use of flat rates because of the up-front costs associated with buying and installing meters, the fear that customers may not be able to afford paying for actual water usage, and the potential negative impact on the public's perception of the system. However, when the LRWA worked with the Town of Kinder water system to install meters, as discussed above, it was able to help the town design rates that were more affordable for customers who typically use less water, including senior citizens. The EPA acknowledges that flat rates may make sense for small water systems whose customers use about the same amount of water each month. However, it also warns that in times of higher than average water use, flat rate systems may not be able to generate enough revenue to keep up with higher demand (e.g., additional treatment costs). The EPA further states that despite the up-front cost, meters are a worthwhile long-term investment.

Small Water Systems. According to the AWWA, small water systems that serve fewer customers and are often spread out in rural areas require more miles of pipe per customer than larger systems. More miles of pipe can result in more repair and replacement costs for systems. In addition, small systems have fewer customers to spread costs over and are not able to take advantage of economies of scale that larger systems have, such as bulk discounts on water treatment chemicals. Exhibit 3 categorizes the 850 systems in Louisiana based on number of customers served.

We found that 617 (73%) of 850 water systems in Louisiana serve a population of 3,300¹⁸ or less and are often located in close proximity to each other. For example, there are 58 small or very small water systems in St. Tammany Parish alone. In addition, during

Source: Prepared by legislative auditor's staff using data from LDH and categories from the EPA.

¹⁸ EPA classifies these systems as small or very small.

fiscal years 2013 through 2015, small systems were more likely to be cited for safe drinking water violations by LDH. Specifically, very small and small water systems, which make up 73% of water systems, accounted for more than 80% of total violations during this time period. Exhibit 4 below shows the number of violations during fiscal years 2013 to 2015 by the size of the system.

Exhibit 4 Violations by Size of Water System Fiscal Years 2013 to 2015			
Size of Water System	Number of Water Systems	Total Violations Cited by LDH	Violations Per System
Very Small (500 or fewer customers)	243	1,592	6.55
Small (501 - 3,300 customers)	374	2,196	5.87
Medium (3,301 - 10,000 customers)	165	524	3.18
Large (10,001 - 100,000 customers)	62	192	3.10
Very Large (more than 100,000 customers)	6	16	2.67
Total	850	4,520	5.32
Source: Prepared by legislative auditor's staff using data from LDH.			

If smaller systems in close proximity were to merge, they could possibly keep rates low by having more customers to spread costs over and take advantage of economies of scale. According to LDH, however, it is not always feasible for small water systems to merge with other systems because of issues related to geography, ownership, the cost to run the lines, and other factors. LDH has recommended that small systems struggling to meet Safe Drinking Water regulations merge with larger systems. For example, upon LDH's recommendation, Plainview Water System merged with the Town of Hornbeck Water System in 2011, and East Cove Utilities merged with Blanchard Water System in 2014. LDH staff stated that it typically recommends these mergers when it has placed systems under an administrative order for violations or when it cites significant deficiencies during an onsite inspection of a system. However, funding and the lack of customers to pay for infrastructure upgrades, chemicals, and monitoring is a statewide issue for all small systems.

Collection Practices. To encourage customers to pay their bills on time, water systems can charge late fees and disconnect services for unpaid bills. However, when water systems do not charge and collect late fees or disconnect customers in accordance with their policies, it causes a delay or loss in revenue. For instance, in the Town of Baldwin 68% (\$78,504) of the total amount owed by utility¹⁹ customers in November 2016 was past due, including \$1,712 from one customer. The auditor has cited the Town for not collecting revenue or disconnecting services in accordance with town ordinances for the past seven years, and the system's expenses have now exceeded its revenues for two of the last three years. According to the mayor, the Town has begun to correct this issue by requiring delinquent customers to pay their current bill plus a portion of the past due balance each month or they will be disconnected. In addition, the Town of Oberlin has been cited by its auditor for not adhering to its cut-off policy for eight of the last nine years, and has had expenses exceeding revenues for the last three years.

¹⁹ Utilities provided by the Town of Baldwin include water, sewer, and gas.

Concern over affordability makes it difficult for governmental systems to raise water rates. Governmental water systems may face challenges when they need to raise rates because they must first obtain approval from local elected officials, including mayors, councils, or water boards. These officials may be hesitant to approve rate increases because of concern over affordability by their constituents. Several governmental systems expressed concern in either our survey or during interviews that their customers could not afford to pay higher rates. One system stated that even though its auditor recommended a rate increase, the town has not considered raising rates because it has so many low income and senior citizens as customers.

The EPA acknowledges that low-income households may face affordability problems if systems raise rates and recommends offering different pricing structures to help mitigate impacts on low income households. The most common example is “lifeline rates,” where low income households are charged lower rates on a baseline water consumption and higher rates on water consumed beyond that amount. In addition, if systems raise rates in small increments as needed rather than postponing larger rate increases, they could help avoid rate shock and allow consumers to adjust their budgets over time.

LDH assists water systems with achieving and maintaining technical, managerial, and financial capacity through its Capacity Development Program. Although affordability of water is a valid concern, water systems should periodically assess whether they are charging sufficient rates to cover expenses so that they can maintain financial stability and cover future costs. In 1996, the Capacity Development Program was created under the Safe Drinking Water Act and requires LDH to assist water systems with achieving and maintaining technical, managerial, and financial capacity to comply with drinking water regulations. To assist systems with achieving and maintaining technical, managerial, and financial capacity, LDH has different requirements for new systems, existing systems, and systems that apply for loans through the Drinking Water Revolving Loan Fund. Exhibit 5 shows the current requirements for each type of water system.

Exhibit 5 LDH’s Capacity Development Program Requirements and Penalties for Water Systems		
Type of System	Capacity Development Program Requirements	Noncompliance Penalty
New System	All new systems must submit a business plan to LDH that shows that the system will have technical, managerial, and financial capacity. New systems must also attend a training session approved by LDH.	LDH may not issue a permit
Existing System	LDH annually selects approximately 80 water systems that are not in compliance with drinking water regulations. These selected systems must submit a review package to LDH that includes a management questionnaire and basic financial information. Selected systems must also attend a training session approved by LDH.	None
Loan System	All systems that apply for Louisiana Drinking Water Revolving Loan funding must demonstrate capacity by submitting business plans, budgets, financial reports, etc. to LDH for review.	LDH may not approve loan funding
Source: Prepared by the legislative auditor’s staff using information provided by LDH and the Louisiana Administrative Code.		

While LDH can withhold permits for new systems and funding from systems applying for loans, there is currently no penalty for existing water systems that do not comply with Capacity Development requirements. As a result, LDH cannot ensure existing water systems achieve and maintain financial, managerial, and technical capacity.

In addition, whereas Louisiana selects a sample of 80 water systems each year that are not in compliance with drinking water standards for capacity review, Mississippi reviews all systems' capacity during its annual onsite inspections. This review includes an assessment of whether the system has increased rates within the last five years, has a policy to review its own rates for sufficiency, has a cut-off policy for delinquent customers, and is following these policies. Each question is then scored and if a system's total score is low, it is required to receive training. If LDH were to gather additional financial and managerial information similar to what Mississippi gathers during its onsite inspections, it could use this information when selecting systems to complete the Capacity Development Program. This may help LDH identify systems that will have difficulty complying with drinking water regulations in the future instead of only reviewing current noncompliant systems.

Matter for Legislative Consideration: The Legislature may wish to consider working with the LRWA and other stakeholders to study and evaluate the most efficient and cost effective approach to address issues affecting water systems whose expenditures exceed revenues, such as requiring systems to track water loss and install meters, and then determine if legislation is needed to implement such measures.

Recommendation 6: LDH should develop, issue, and enforce penalties for existing water systems that do not comply with the Capacity Development Program and required training.

Summary of Management's Response: LDH agrees with this recommendation. According to LDH, the conclusion of this audit validates the importance of the Capacity Development Program. Per LAC 51:XII, LDH does have authority to implement enforcement actions or penalties for systems that are under an Administrative Order. Therefore, LDH intends to include Capacity Development requirements as part of each Administrative Order. See Appendix A-2 for LDH's full response.

Recommendation 7: LDH should collect additional financial and managerial information during onsite inspections of water systems to identify systems that may need to be selected for participation in its Capacity Development Program.

Summary of Management's Response: LDH agrees with this recommendation. According to LDH, it will include Capacity Development financial questions on all routine sanitary surveys in order to identify those systems which may need and benefit from assistance provided through LDH's Capacity Development Program. See Appendix A-2 for LDH's full response.

Re: Performance Audit Report

Dear Mr. Purpera:

This letter is in response to your findings and recommendations made in Audit Report #40140068. The LPSC agrees with the recommendations contained in the report with the following clarifications:

Finding 1: LPSC needs to improve the timeliness of its rate reviews for private water systems. During fiscal years 2013 through 2015, LPSC did not approve six (19.4%) of the 31 water rate increase requests within 12 months as required by the Louisiana Constitution, primarily due to water systems not providing information timely.

Recommendation 1: LPSC should ensure that it reviews all rate increase requests from water systems within 12 months as required by law.

As the audit report acknowledges, the primary reason for the LPSC taking longer than 12 months to complete rate proceedings was due to water systems *not providing information timely*. Any water system could delay getting requisite information to the LPSC during a rate proceeding;

however, in all instances in the audit report, the water systems were non-profits which are no longer regulated by the LPSC. The non-profits only recently came under LPSC regulation prior to the audit period, and have since been exempted from LPSC regulation. Most were unaccustomed to the LPSC rate proceeding process, had limited staff to perform normal operating functions as well as work with LPSC Staff on the rate proceeding, and were inexperienced with accounting procedures and record-keeping methodologies utilized by the LPSC in rate reviews. All of these factors contributed to delays in rate proceedings. While LPSC Staff could have taken aggressive measures to obtain information more timely, such as motions to compel information or denying rate applications based on the water system's failure to timely provide information, the LPSC Staff continued to work with the companies to get the necessary information to complete the proceeding even though the outcome was that the process took longer than 12 months. While the LPSC strives to complete all rate proceedings within 12 months, exercising some patience and cooperation resulted in a better overall outcome in these proceedings.

Recommendation 2: LPSC should evaluate whether implementing an abbreviated process for annual inflationary rate increases would be a feasible option. This option may encourage more water systems to request rate increases when necessary.

The LPSC has an open rulemaking proceeding to investigate the possible establishment of a rule requiring LPSC jurisdictional water utilities to implement rate stabilization plans or other types of periodic rate reviews, Docket No. R-31002. Further, at the Commission's January 18, 2017 Business and Executive Session, Commissioner Francis directed LPSC Staff to open a rulemaking docket to consider adoption of best practices related to ratemaking within the water and wastewater industry including but not limited to implementation of a consumer price indexing mechanism, future test year and collection and distribution system improvement charges. The directive also stated that to the extent any of these issues are being addressed in ongoing dockets, Staff is directed to proceed in those dockets, allowing additional interventions if necessary. LPSC Staff is taking the steps to fulfill this directive.

Finding 2: Better coordination between LPSC and LDH would help ensure that LPSC is regulating rates for all water systems. We identified 14 (3.2%) of the 440 private water systems where LPSC had not approved initial rates or received the required annual reports from the systems to ensure rates had not been increased without approval.

Recommendation 3: LPSC should follow-up with the 14 noncompliant systems and ensure that it approves their rates as required, and cite and collect penalties when appropriate.

As stated in the report, of these 14 systems, LPSC was unaware that six were operating without having requested and received approval of their initial rates. The LPSC was aware of the existence of eight of the systems, had contacted them to bring them into compliance, and had assessed penalties to seven of these systems. However, LPSC had not received the required rate information nor collected any penalties from these systems at the time of our audit. Thirteen of the 14 systems identified in the audit report are non-profit systems that are now exempt from the

Page 3 of 3

LPSC's jurisdiction. LPSC Staff will follow up with the one for-profit system to bring it into compliance as recommended.

Recommendation 4: LPSC should notify LDH when new water systems submit proposed rates to help LDH ensure that it is regulating all water systems as required by the Safe Drinking Water Act of 1996.

The LPSC will implement procedures to work with LDH on safeguarding that all new water systems are operating within the laws and regulations of the state of Louisiana.

Should you have any further questions or concerns, please do not hesitate to contact me.

Sincerely,

Eve Kahao Gonzalez
Executive Secretary

RE: Response to the Louisiana Public Service Commission Water Rates Evaluation

The Louisiana Department of Health, Engineering Services Section offers the following response to the Recommendations provided by the Louisiana Legislative Auditor.

Finding 1/Recommendation 5: LDH should notify LPSC when new water systems apply for permits to begin construction to help LPSC ensure that it is regulating all water systems' rates as required by the Louisiana Constitution.

LDH Response: LDH agrees with this recommendation.

LDH will send LPSC copies of permits for new water systems.

Finding 2/Recommendation 6: LDH should develop, issue, and enforce penalties for existing water systems that do not comply with the Capacity Development Program and required training.

LDH Response: LDH agrees with this recommendation.

The conclusion of this audit validates the importance of the Capacity Development Program. Per LAC 51:XII, LDH does have authority to implement enforcement actions or penalties for systems that are under an Administrative Order. Therefore, LDH intends to include Capacity Development requirements as part of each Administrative Order.

Finding 2/Recommendation 7: LDH should collect additional financial and managerial information during onsite inspections of water systems to identify systems that may need to be selected for participation in its Capacity Development Program.

LDH Response: LDH agrees with this recommendation.

February 9, 2017

Response to the Louisiana Public Service Commission Water Rates Evaluation

LDH will include Capacity Development financial questions on all routine sanitary surveys in order to identify those systems which may need and benefit from assistance provided through LDH's Capacity Development Program.

Should you have any questions, please contact Jimmy Guidry, State Health Officer, Louisiana Department of Health, at (225) 342-3417.

APPENDIX B: SCOPE AND METHODOLOGY

We conducted this performance audit under the provisions of Title 24 of the Louisiana Revised Statutes of 1950, as amended. The objective of this audit was:

To evaluate whether the Louisiana Public Service Commission (LPSC) approved water rates for private water systems timely, and if the rates charged by governmental water systems are high enough to cover their expenses.

We conducted this performance audit in accordance with generally accepted government auditing standards issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide reasonable basis for our findings and conclusions based on our audit objective. We believe the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objective. This audit generally covered the period of July 1, 2012, through June 30, 2015, although some analyses included data from fiscal year 2016. To answer our objective, we performed the following audit steps:

- Categorized each of Louisiana's 850 water systems as private nonprofit, private for-profit, or governmental by working with LPSC, the Louisiana Department of Health (LDH), and the Louisiana Rural Water Association (LRWA), and by verifying this information using the Louisiana Secretary of State's website. For this audit we focused only on community water systems that supply water to the same population year-around (i.e., governmental water systems or water systems that serve other groups of residents). We further excluded water systems such as mobile home parks that do not charge customers separately for water, but instead include water charges in rental amounts.
- Compared water systems regulated by LPSC and LDH to identify systems that should be regulated by either agency.
- Researched the Louisiana Constitution, Louisiana Revised Statutes, LPSC's website, and LPSC's orders, and conducted interviews with LPSC staff to understand LPSC's legal authority and role in the regulation of water rates of private systems.
- Interviewed LPSC staff to obtain an understanding of the processes related to the regulation of private water systems.
- Reviewed water rate increase requests from fiscal years 2013 through 2015 to determine if LPSC completed reviews within timeframes established in the Louisiana Constitution.

- Obtained and analyzed water rates for private systems regulated by LPSC.
- Created a survey for Louisiana's 850 water systems requesting general information about the systems and their rates, as well as feedback on LPSC's performance from private systems regulated by LPSC. We worked with LRWA to distribute the survey to governmental water systems. We followed up via telephone with systems that did not initially respond to the survey or provided incomplete or conflicting responses, ultimately receiving information directly from 530 (62.4%) of the 850 water systems. With LRWA's assistance, we sent compiled survey results back to water systems for verification.
- Collected and analyzed financial statements to obtain local governmental water systems' revenues and expenses for fiscal year-end 2013 through fiscal year-end 2015, from amounts reported in proprietary funds when available. We were unable to review all governmental water systems' revenues and expenses because 210 (53.9%) of the 390 local governments operate multiple utility systems (i.e., sewer, gas, electricity, etc.) and do not report revenue and expenses separately for each utility. We also included all revenue (i.e., charges for services, fees, etc.) and expenses (i.e., salaries, depreciation, interest, etc.); however, we did not include transfers to or from other governmental funds in our analyses.
- Sent report draft to LRWA and the Louisiana Municipal Association for review.

APPENDIX C: RESIDENTIAL AND COMMERCIAL MONTHLY-EQUIVALENT WATER BILLS, BY PARISH, AS OF JUNE 2016 RATES

The exhibit below details residential and commercial monthly-equivalent water bills at various consumption levels for customers both inside and outside city, town, or parish limits, if applicable, based on June 2016 rates, by parish. *Please note that higher rates may be justified in certain circumstances or necessary to protect public health.*

APPENDIX D: GOVERNMENTAL WATER SYSTEM REVENUES AND EXPENSES, BY PARISH, FISCAL YEARS ENDING 2013 THROUGH 2015

The exhibit below summarizes revenues, expenses, and net revenues of governmental water systems for fiscal years ending 2013, 2014, and 2015, by parish. Revenues consist of operating and nonoperating revenues including capital contributions, loans, grants, and donated assets and property. Expenses consist of operating and nonoperating expenses including depreciation expenses. Governmental water systems that provide multiple utility services but do not separately report revenues and expenses for water services in financial statements are indicated by gray shading. *Please note that negative net revenue, indicated in red, does not necessarily mean that water rates are too low; other factors may contribute to negative net revenue such as extraordinary expenses, uncollected revenue, theft of revenue, etc.*

APPENDIX E: WATER SYSTEM GENERAL INFORMATION, BY PARISH

The exhibit below contains general information for water systems including system type, water source, and the approximate population served according to LDH, by parish. Also included is monthly-equivalent water bills for residential customers consuming 5,000 gallons and commercial customers consuming 10,000 gallons based on June 2016 rates (for more information on residential and commercial monthly water bills, please see Appendix C). In addition, the number of years that operating and nonoperating expenses exceeded revenue for governmental systems during fiscal years 2013 through 2015 is shown (for more information on revenues and expenses of governmental systems, please see Appendix D). The exhibit also contains the systems' reported age of the majority of its infrastructure, whether it tracks water loss, estimated water loss if applicable, and how many years since its last rate increase. Finally, the number of deficiencies and violations cited by LDH during fiscal years 2013 through 2015 is included. *Please note that higher rates may be justified in certain circumstances or necessary to protect public health, and a history of expenses exceeding revenue does not necessarily mean that the system is charging rates that are too low.*

Water System	Type Governmental (G), Non-Profit (NP), For-Profit (FP)	Water Source Ground Water (GW); Ground Water Purchase (GWP), Surface Water (SW), Surface Water Purchase (SWP)	Population (per LDH)	Monthly Residential Bill 5,000 Gallons	Monthly Commercial Bill 10,000 Gallons	Rate Type Residential	Governmental Systems - Years Expenses Exceeded Revenues (FY13 - FY15)	Age of Majority of Infrastructure (Years)	Tracks Water Loss?
